

MicroLoad EzScale was first introduced to our plant in Lathrop, CA in 2002 by Load Masters. We tried other loader scales but were not satisfied with their accuracy and performance. When we installed MicroLoad EzScale in the loaders, our operators began to use it as a tool which made them more efficient and precise in the truck loading process.

The benefits of MicroLoad EzScale include: (1) truck turnaround time in the pit has been reduced significantly, because they are loaded accurately the first time. (2) Truck traffic in the pit has been reduced noticeably because they do not have to go back to trim loads or get more products.

One of our concerns was that the loader scale will slow down the loading process, but MicroLoad EzScale provides weighing on the move, which has provided faster truck loading cycle. It has increased fuel efficiency of the loader and the trucks. It is simple to use and loader operators like it

We started with one and currently utilize three scales at our site. I recommend MicroLoad EzScale to anyone who is looking towards improving their loader efficiency and profitability.
