Why Invest in EzScale

Accuracy

- **Guaranteed** more accurate than any competitor, when weighing with the machine on the move **better than ½ of 1%**;
- Four-point calibration for improved accuracy when weighing a partial bucket of material.
- Weights acquired with hydraulics closed to eliminate variations caused by RPM, temperature / viscosity of hydraulic oil and movement of the machine.

Reliability

- Thirty six (36) month computer component warranty
- Made of Die Cast Metal, (not plastic) for years of reliable service;
- No need for periodic calibration, even when adding bucket teeth or a new cutting edge
- Several systems in use today have never required calibration or service since initial installation and calibration.

Operator Friendliness

- Operator chooses their own preferred operating RPM depending on the conditions (for best accuracy, other systems must operate at the calibrated RPM);
- Weighs automatically and accurately (to within a 1/2%) "While the loader is on the move"
- Operator friendly and easy to read display comes with sunshield.
- Touch screen commands, operation is intuitive!
- Counts down from a Target or counts up to accumulate Running Total automatically (no need to push a button).

Why Invest in EzScale

Economical

- Competitively priced yet Upgradeable – Ez~Scale can be upgraded to the current technology in order to use new options just by inserting a USB key with the new software. Others, either cannot supply the options or can only supply them with the purchase of new systems;
- Saves on fuel, wear on pins, bushings, engine, and time because the operator is not required to warm the hydraulics to a predetermined temperature before using. In order to get an accurate weight, other systems must have the hydraulics warmed to operating temperature every time before using. They recommend lifting a loaded bucket several times;
- Weighs accurately every time, while the machine is moving, in normal conditions. Other systems must be stationary or on smooth ground, to produce an acceptable weight or the scale will not display a load weight and the operator must weigh the bucket again, or they will display an incorrect amount;
- The Ez~Scale is much more than an accurate weigh system With, Data Logger and Printer (optional) and Driver Identification (standard) on your load out equipment, it becomes a valuable management tool, capable of tracking the activity of the operator, loader, trucks being loaded and quantity of material handled.

Why Invest in EzScale

Advantages on Investing in an Ez~Scale!

How does Ez~Scale accomplish this?

- The basic Ez~Scale system is capable of tracking up to 250 trucks / Customers and/or 250 product names. It can be utilized for loading trucks to a predetermined net load weight.
- With Data Logger, Printer and Driver Identification installed, when the operator turns on the scale, they are shown a list of operator names; they simply touch their name on the list to identify themselves. Ez~Scale now tracks the loads they weigh under their name.
- As a truck arrives for a load, the operator selects the truck from the ****Customer List**** and the material to be loaded from the ****Product List****. When the operator presses the "Target Area", the pre-entered net load weight is displayed. The operator can accept this or change it at will.
- As the operator loads the truck, every bucket-full is automatically weighed and subtracted from the desired Target Weight. When the truckload is completed, the Data Logger automatically records the date, time, target selected, quantity delivered, product and customer. Ez~Scale can even be set to automatically print a (single or double) hard copy ticket.

Product Support

- Direct Product Support by our toll free number, e-mail or fax from anywhere in North America;
- **Load Masters** stock product & parts for all services and Warrantable Claims;
- Professional service technicians with fully equipped service vehicles;
- Dealers with spare parts and trained technicians in Canada, and United States;
- We will even ship parts direct and assist your technician over the telephone.
